

MICHIGAN PNEUMATIC TOOL, Inc.

Virtually Every Air Tool You Need. Right Now!

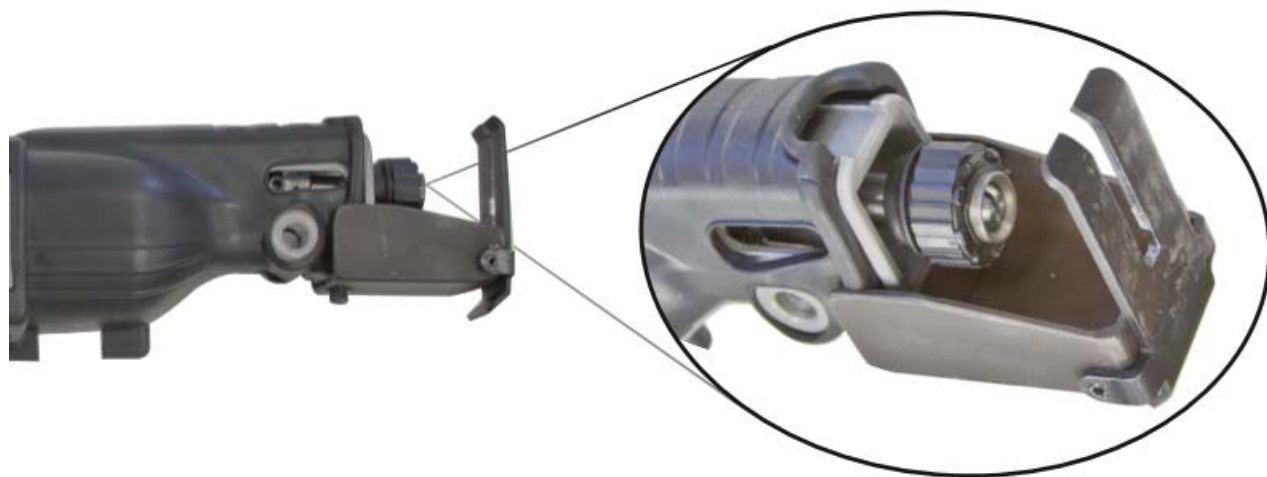

AIR POWER & MPT SOLVE CUTTING APPLICATION

CUSTOMER: Gas Utility

CHALLENGE: Customer was experiencing high breakage of electric saws but needed a quick change blade solution only found on traditional electric reciprocating saws. In addition, they had a safety concern of using electric tools outside near gas lines.

AIR POWER's SOLUTION: Working with the engineers at Michigan Pneumatic Tool, MPT developed a pneumatic reciprocating saw and designed a wrench free chuck. The pneumatic saw provide a safe, spark free option around hazardous environments.

RESULT: The customer's usage of saws dropped by over 50% as the aluminum housing proved superior to the traditional plastic housings of the electric equivalent. The quick change blade system saved time and headache for the operator who would, on occasion, drop or lose the hex wrench that had been part of the traditional air version. The air motor drastically reduced the chance of sparks that could cause explosions.

Serving All Industries: Automotive, Aircraft, Assembly, Construction and Foundry
