The Global Leader in
Powder Coating Technology

XACTFIT™

GENUINE REPLACEMENT PARTS

GEMA'S XACTFIT™ GENUINE REPLACEMENT PARTS

A Gema powder coating system is an investment in the future of your company. So why short-change the performance of your equipment by using sub-standard, non-Gema aftermarket replacement parts?

Only Gema XactFit components and placement parts are made to work flawlessly with Gema's world renowned powder coating systems. The same uncompromising design, engineering and assembly standards that go into the original equipment, goes into to all Gema XactFit replacement parts as well. The use of aftermarket replacement parts can affect final finish quality and system reliability, as well as add to system downtime, and compromise the safety of your operators. You might save money in the short-term, but aftermarket replacement parts can cost you a lot more in the long run.

HERE'S WHY:

XactFit parts are designed to work

Aftermarket replacement parts don't benefit from Gema's design expertise and precision manufacturing. They may look like Gema parts, but they don't perform like Gema parts.

XactFit parts are designed to maintain your system warranty

Aftermarket replacement parts are poor imitations of the real thing... genuine Gema parts...and can potentially invalidate your warranty or worse yet, cause system malfunctions and create dangerous situations for your operators.

XactFit parts are designed to last

Original Gema parts are more durable and keep your powder coating equipment operating at like-new performance levels. And Gema parts can last up to twice as long as aftermarket replacement parts.

XactFit parts are designed to perform

Gema replacement parts assure consistent, high-level performance of your powder coating equipment, which helps to reduce defective finish rejects, lower your powder usage, lower your labor costs, and increase productivity.

XactFit parts are designed to meet worldwide certifications

Gema systems, components and parts are CE, PTB and FM certified and licensed. By using aftermarket replacement parts, you may void these certifications.

XactFit parts are easy to get

Gema has more nationwide parts distribution capabilities than anyone else in the industry. That means critical wear parts are always close by for immediate delivery. And Gema's ServiceNet Support provides the technical knowhow to get your system back on-line as quickly as possible.

Don't jeopardize the integrity of your powder coating operation by using aftermarket replacement parts. Insist on Gema XactFit replacement components and parts for your Gema powder coating systems. They're the only true fitting replacement parts for your Gema equipment!
